

Changing Funding Regimes in Research and Innovation Policies

Dietmar Braun

Institut d'Études Politiques et
Internationales, Université de Lausanne,

Currently Honorary Fellow at the
Department of Political Science at
Melbourne University

Objectives

- Demonstrate transformations in policy rationales on and the use of instruments in research funding
- Show that the actual policy regime is based on several ideological layers that co-exist (policy-mix) and create tensions

Reforms in Governance of Public Funding

- Transfer of property rights to performing institutions
- Facilitate mobility of researchers from public to private sector
- Facilitate spin-offs
- Facilitate “incubators”
- More priority-setting
- More inclusive priority-setting
- From institutional to competitive grants
- Centres of Excellence
- Public-Private Partnerships

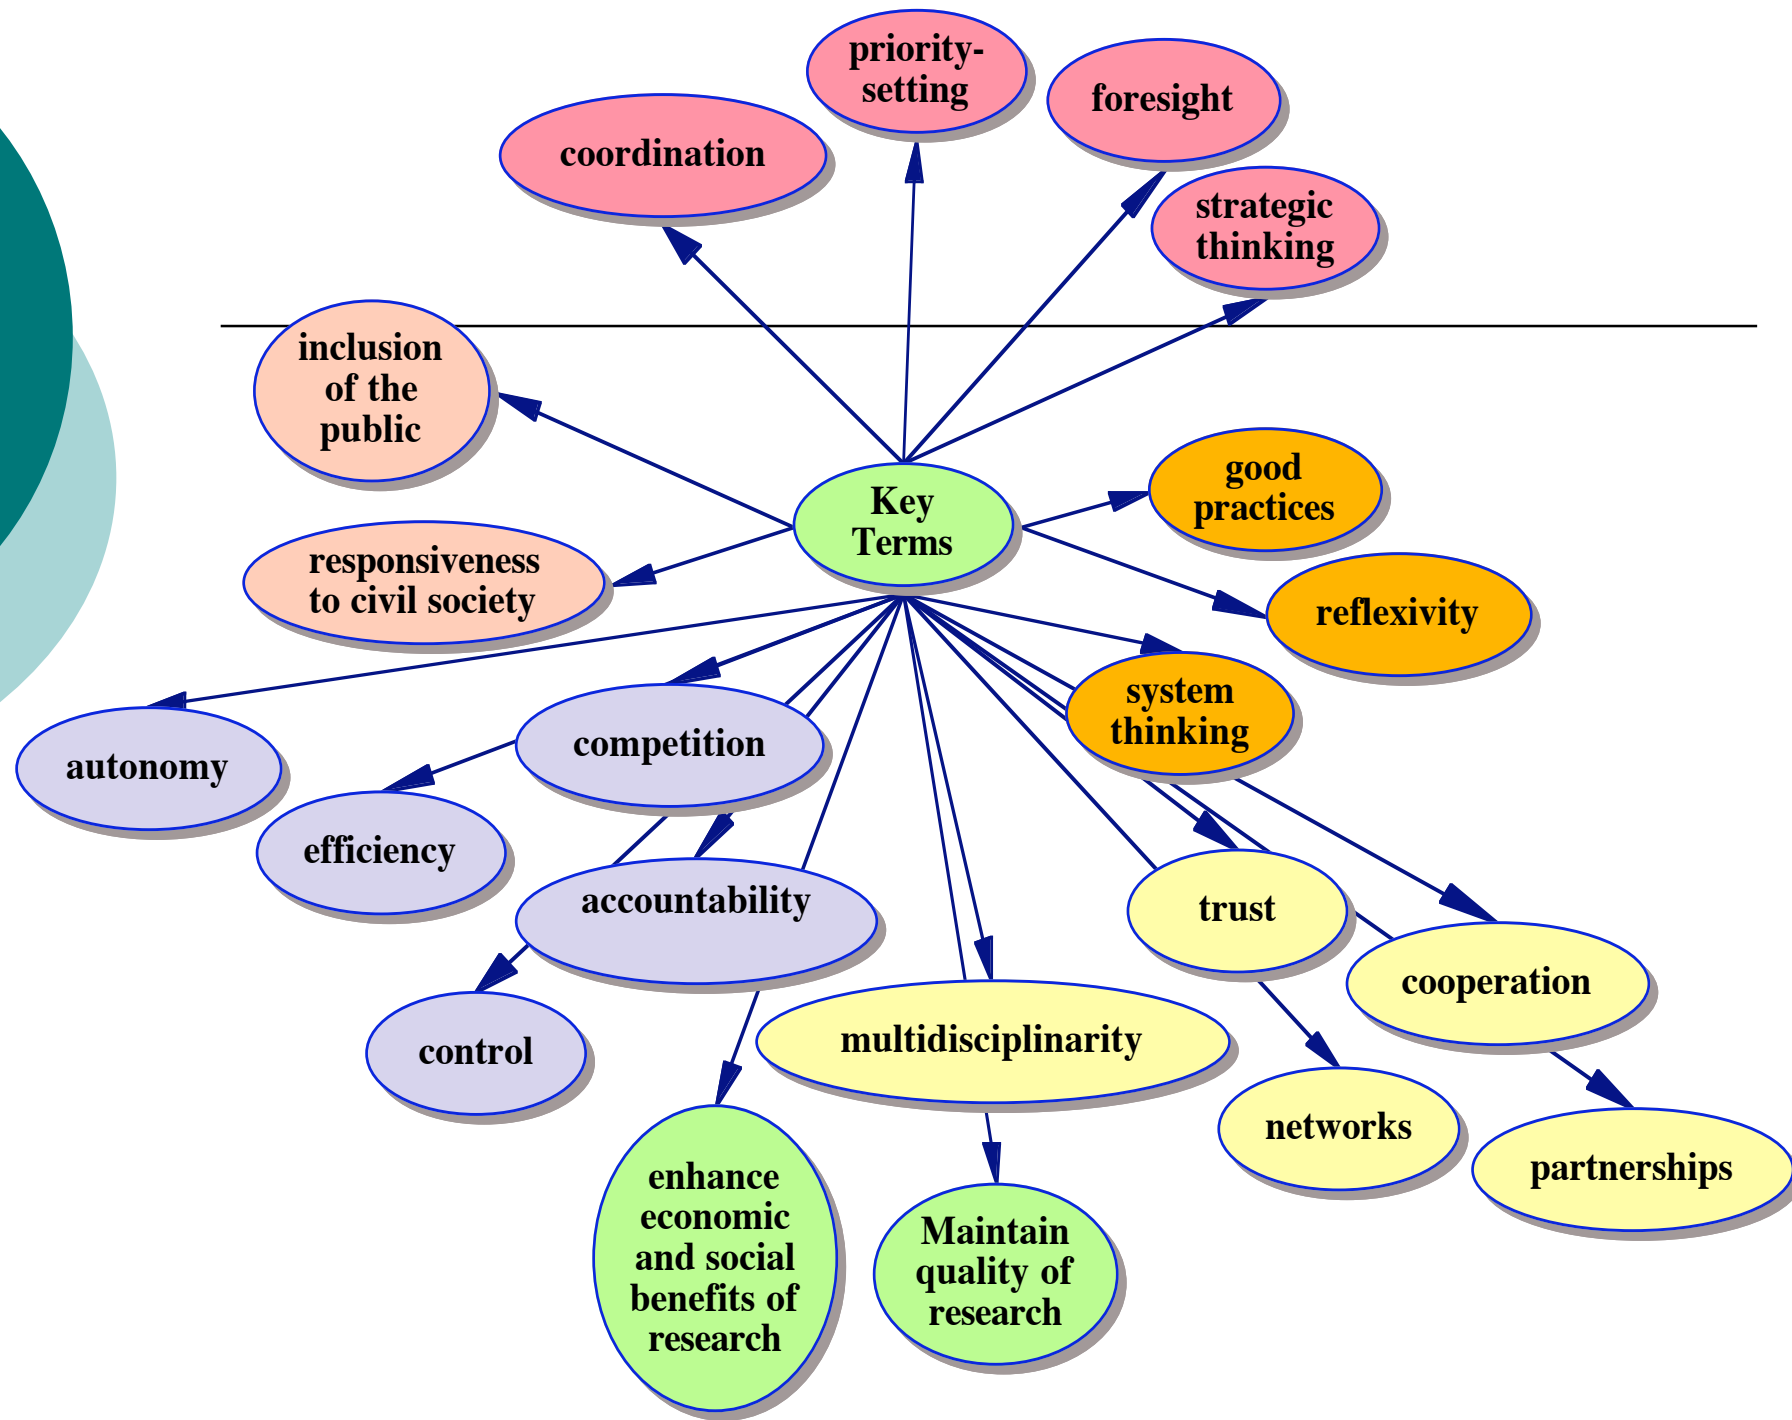

(cont.)

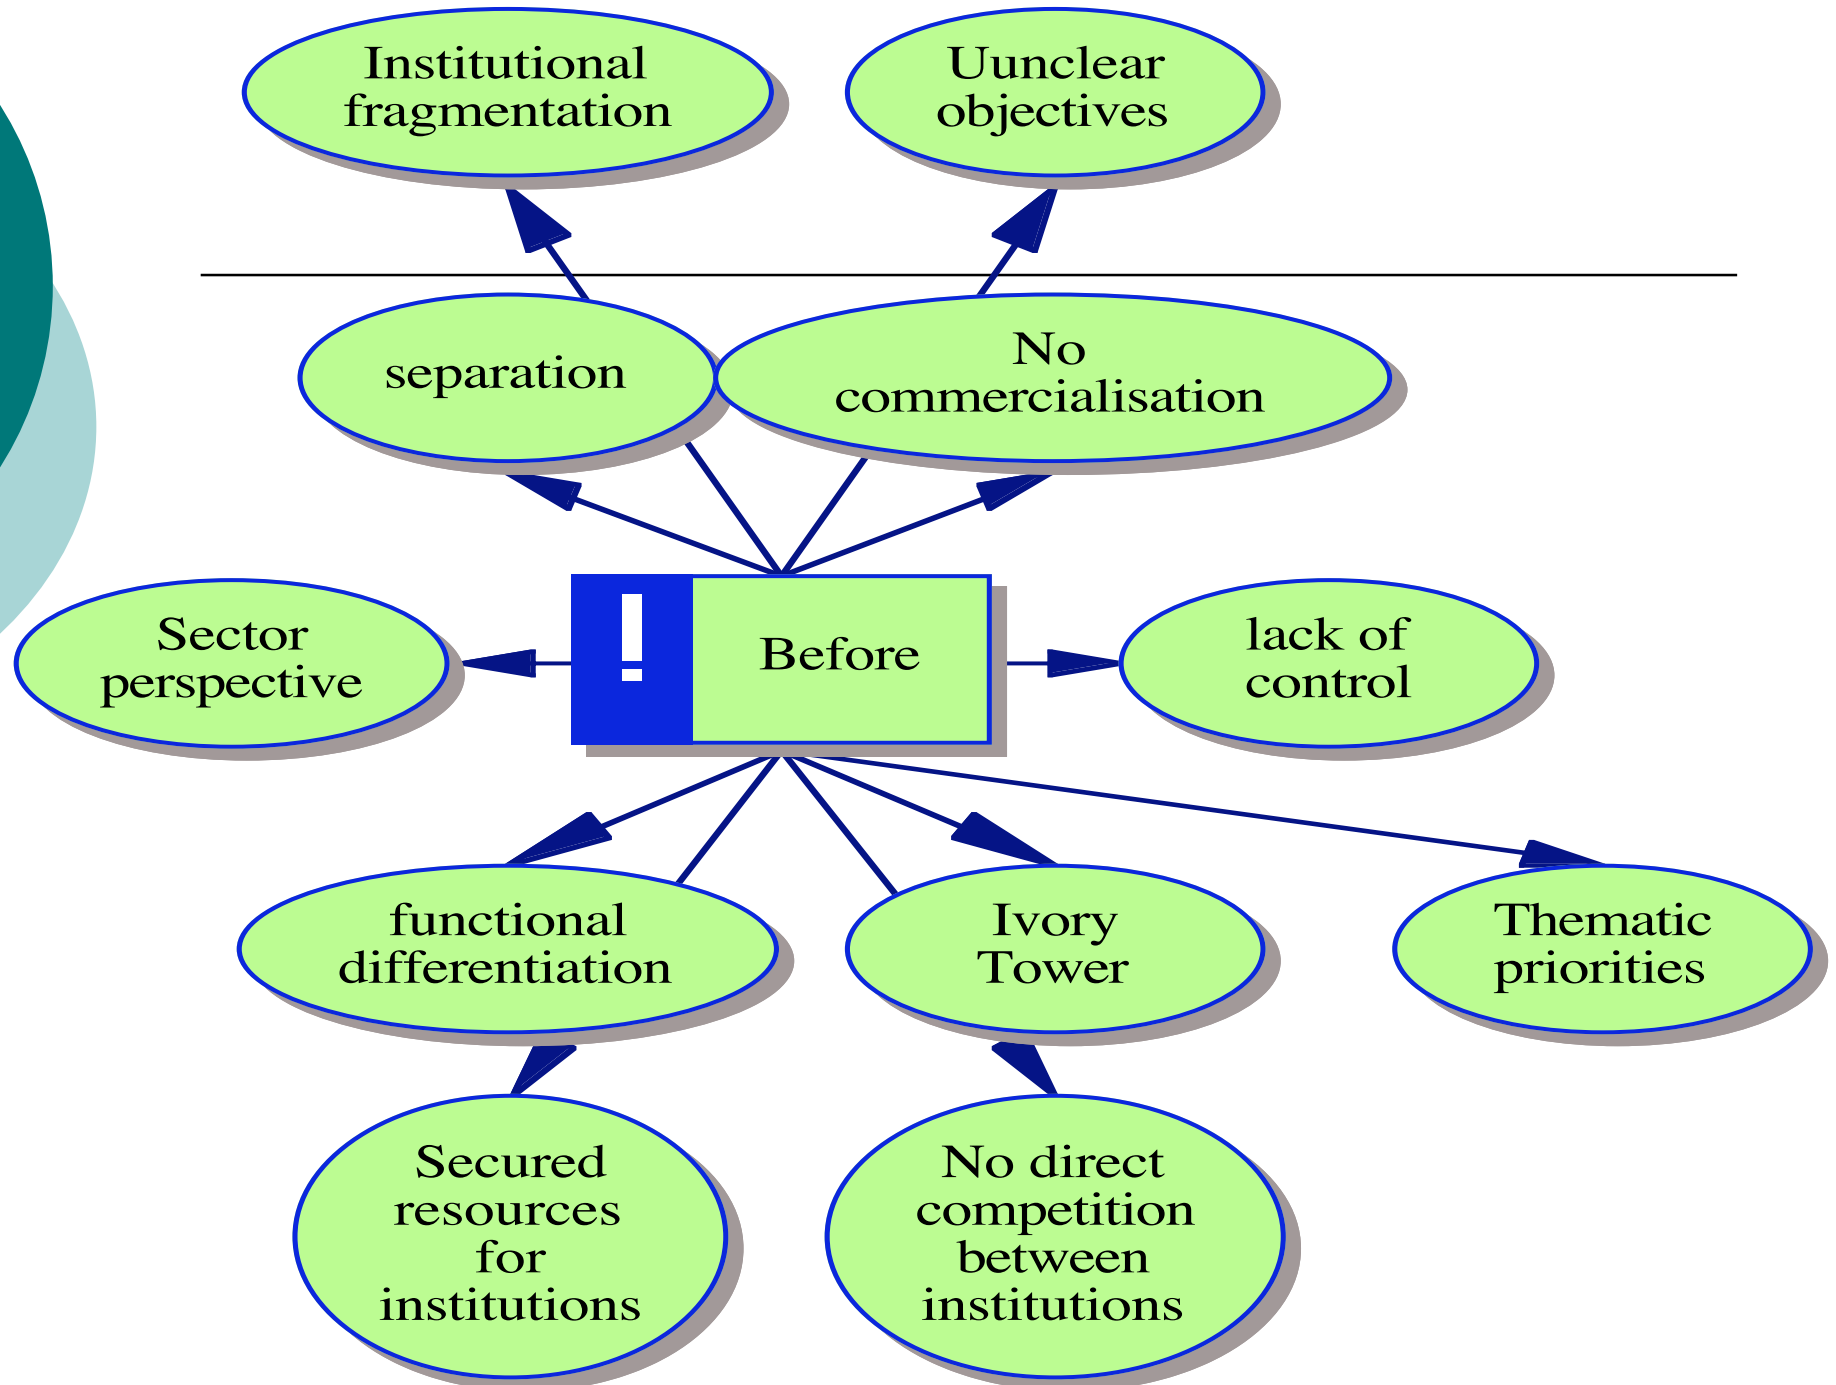

- Establish contracts with public-sector research and funding institutions
- Greater autonomy of such institutions
- Increase cooperation between research institutions
- Increase coordination in policy formulation
- Increasing role of advisory bodies
- Use foresight mechanisms
- Ex ante, ongoing and ex post evaluation of funding schemes

(cont.)

- Integrate stakeholders in funding bodies
- Improve international cooperation
- Stronger role of higher education institutions compared to other public sector research institutions

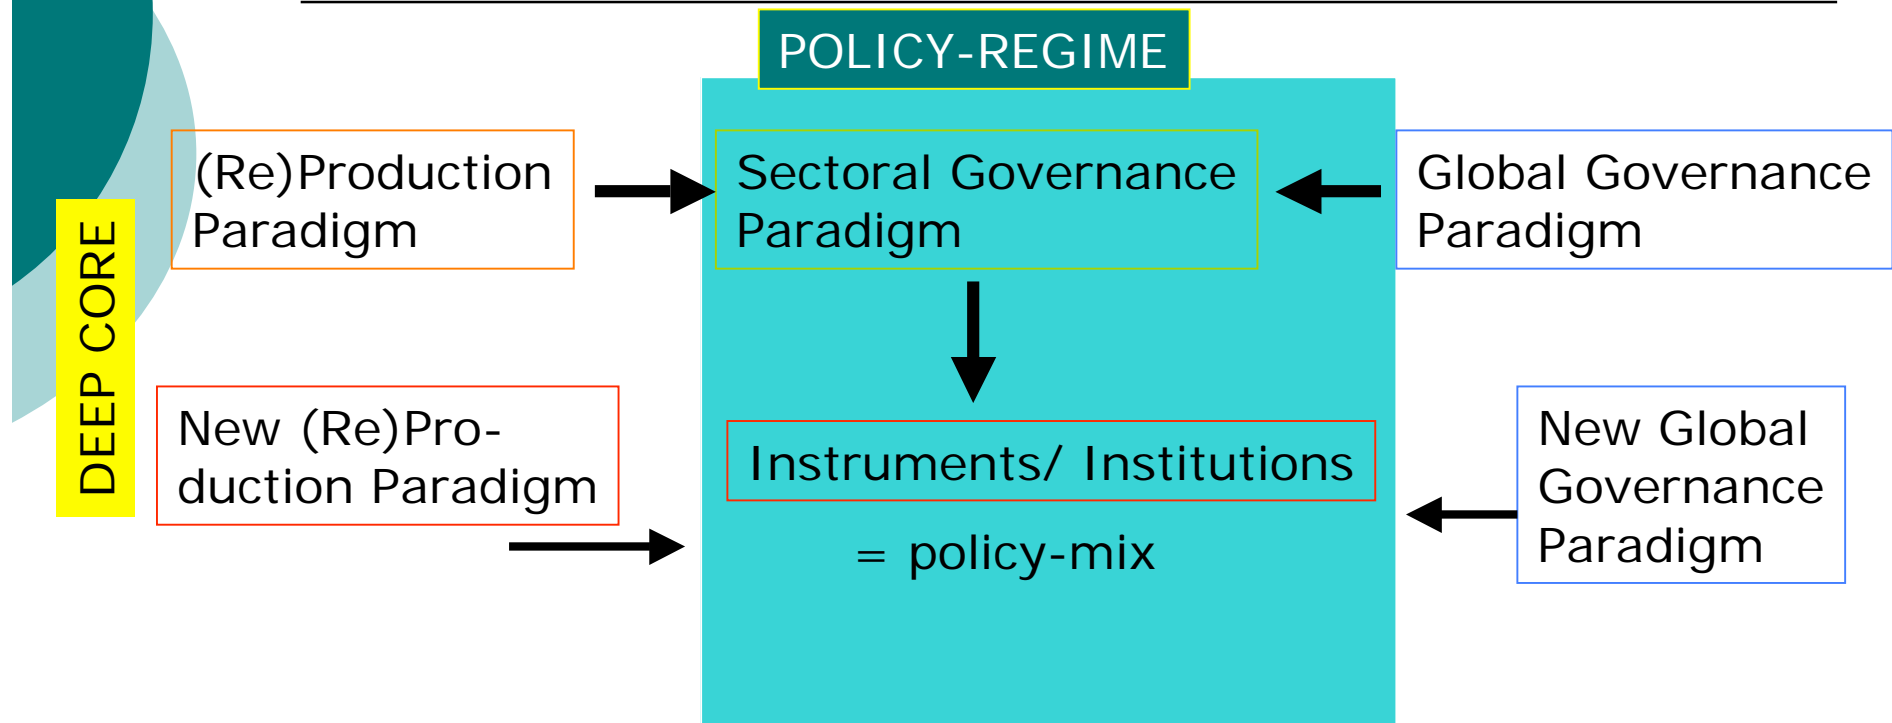

Is there a unifying paradigm? Is there a cohesive funding regime?

- There is convergence, is there a unifying paradigm?
- Apparent antinomies:
 - High quality research versus social and economic responsiveness
 - Discretion versus control
 - Cooperation and trust versus competition
 - Priority-setting versus serendipity

A model of a policy-regime

Policy-mix 1 = result of different ideational levels
Policy-mix 2 = result of incrementalism

Speculations

- Policy-regimes seldom exist as homogeneous entities
- Conflicts may arise between the reproduction and global governance paradigm how to manage resources
- The deep core may be contested by another deep core
- Policy-regimes are, therefore, in construction and change by adding paradigms and reconfiguring components

First period: 1945-early 1970s

-Efficiency and
effectiveness have a high
status

-Accountability and
Evaluation

Use foresight and experts

Consequences of Neoliberalism on instruments of science policy

	WITHOUT STRINGS	WITH STRINGS
INSTITUTIONAL FUNDING		
PROJECT AND PROGRAMME FUNDING		
STRUCTURAL POLICIES		

The diagram illustrates the consequences of neoliberalism on instruments of science policy. It features a table with three rows and two columns. The columns are labeled 'WITHOUT STRINGS' and 'WITH STRINGS'. The rows are labeled 'INSTITUTIONAL FUNDING', 'PROJECT AND PROGRAMME FUNDING', and 'STRUCTURAL POLICIES'. The 'WITH STRINGS' column is shaded light blue. Two horizontal arrows point from the 'WITHOUT STRINGS' column to the 'WITH STRINGS' column, one for 'INSTITUTIONAL FUNDING' and one for 'PROJECT AND PROGRAMME FUNDING'. A vertical arrow points down from the 'WITH STRINGS' cell in the 'PROJECT AND PROGRAMME FUNDING' row to the 'WITH STRINGS' cell in the 'STRUCTURAL POLICIES' row.

STRUCTURAL POLICIES		

Consequences: Focus on knowledge transfer between academia and industry, on innovation as the key reference point of knowledge production; on networks as the adequate form of organisation; on trans- and interdisciplinarity, on a strengthening of coordination, on the “adaptive policy-maker”; on inclusion of actors in the research sector in policy formulation and implementation

Policy-mix in today's policy-regime
